## Workshop Agenda

---

### 1. Integrating MultiWindow

- The easy way

### 2. Verifying support for features

- Using the sdk-v1.0.0.jar interface file

### 3. Integrating Gestures

NOTE: you must have the Mobile SDK installed

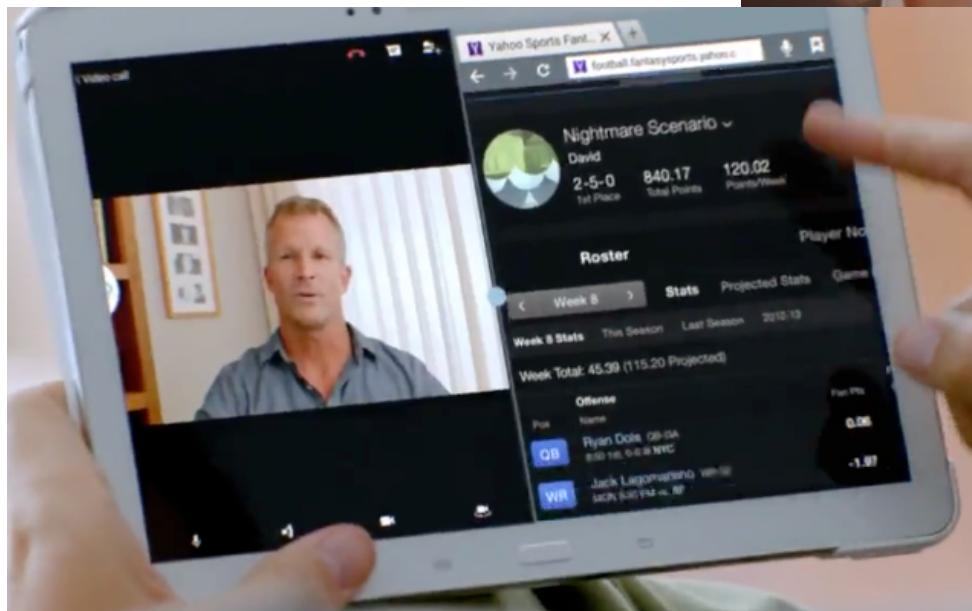

<http://developer.samsung.com/samsung-mobile-sdk>

# MultiWindow

SAMSUNG DEVELOPERS

# MultiWindow – What is it?

- Google Hangouts
- Chrome
- Email

SAMSUNG DEVELOPERS

What's next? You decide.

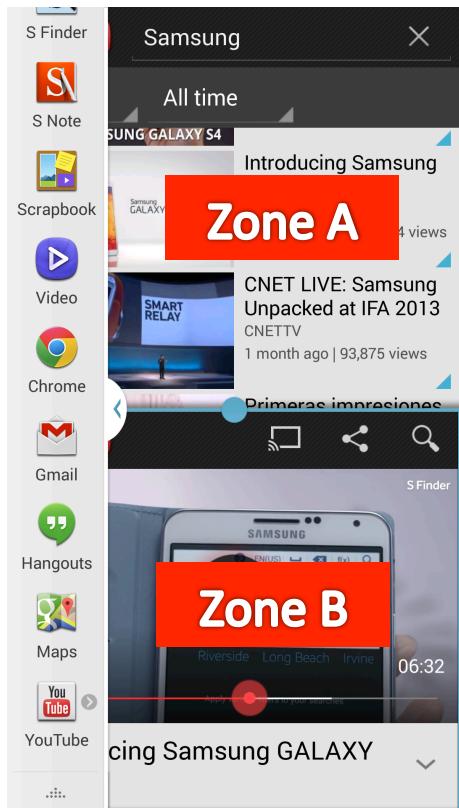

## MultiWindow Features

---

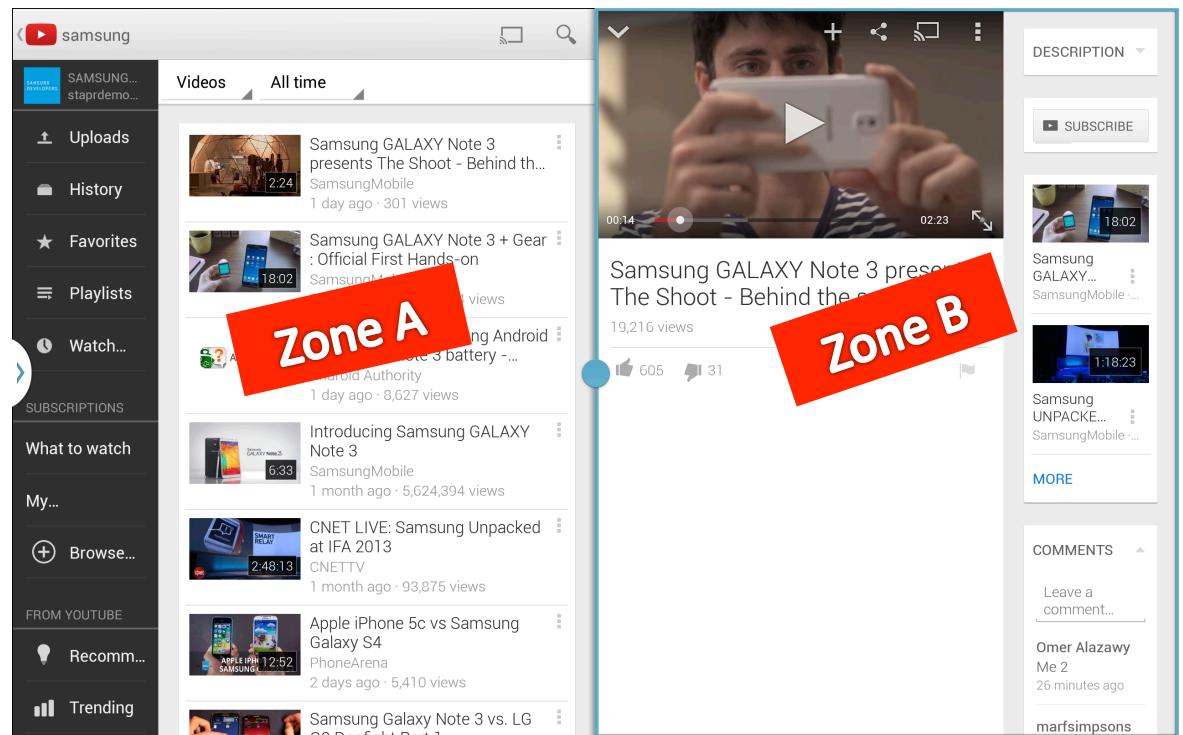

- Zones
  - Supports 2 separate applications running side-by-side
- Style
  - Split Window, Normal, Pen Window
- MultiWindow Tray
  - Navigation bar for multiwindow-enabled apps
- MultiInstance MultiWindow
  - Supports same application running in 2 different windows
- Drag-n-drop
  - Between windows

# MultiWindow Features -- Zones

## ■ Note 3

## ■ 2014 Note 10.1

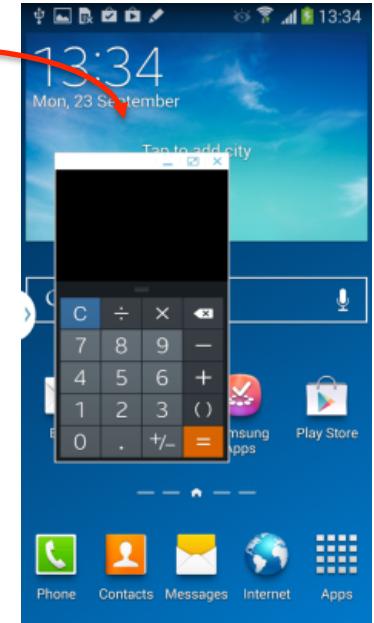

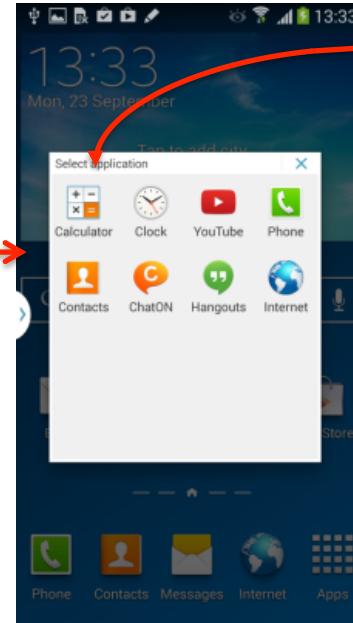

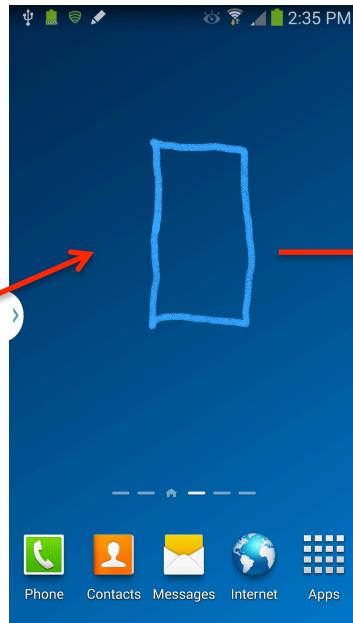

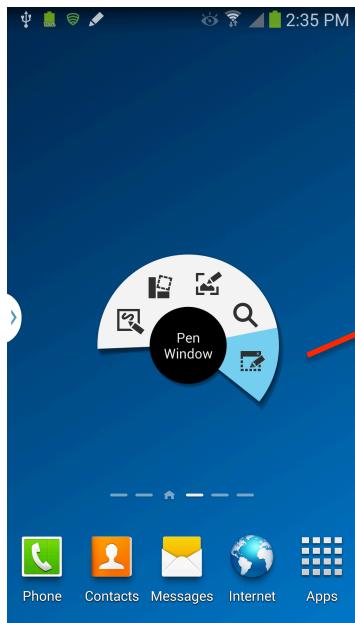

SAMSUNG DEVELOPERS

What's next? You decide.

# MultiWindow Features -- Styles

- Side-by-side
- Pen Window

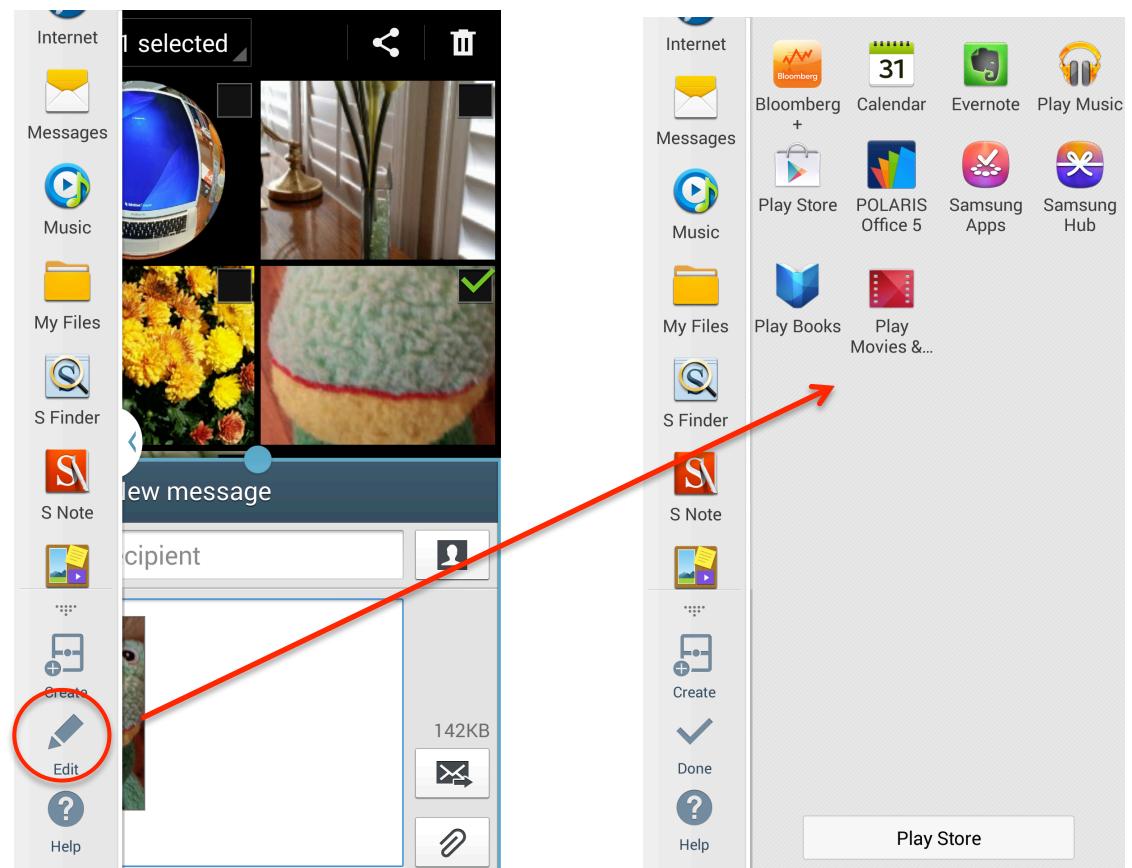

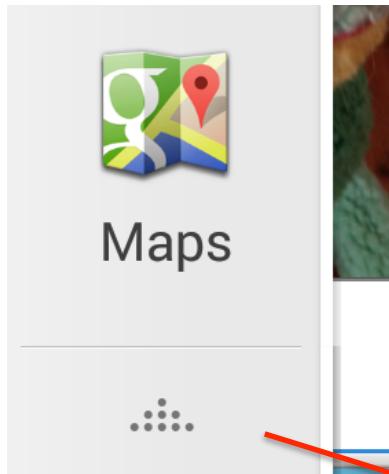

SAMSUNG DEVELOPERS

What's next? You decide.

# MultiWindow Features -- Tray

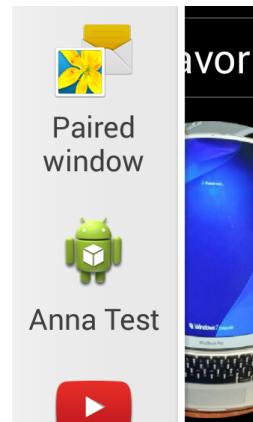

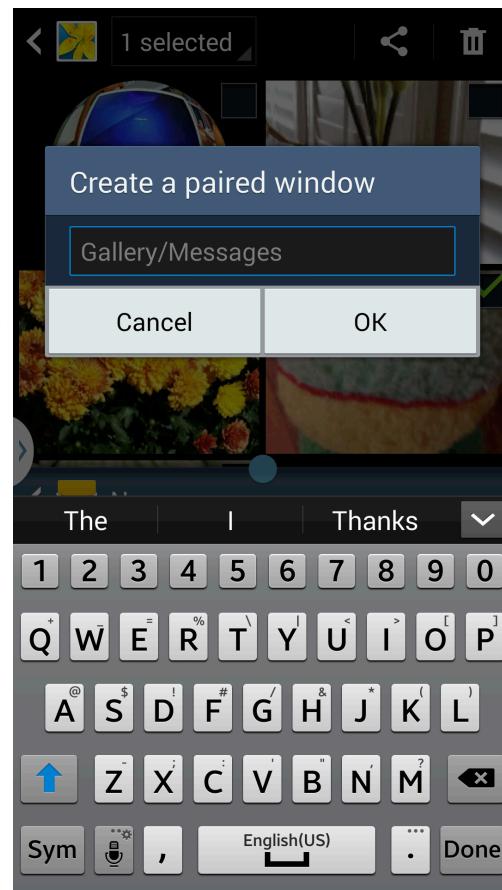

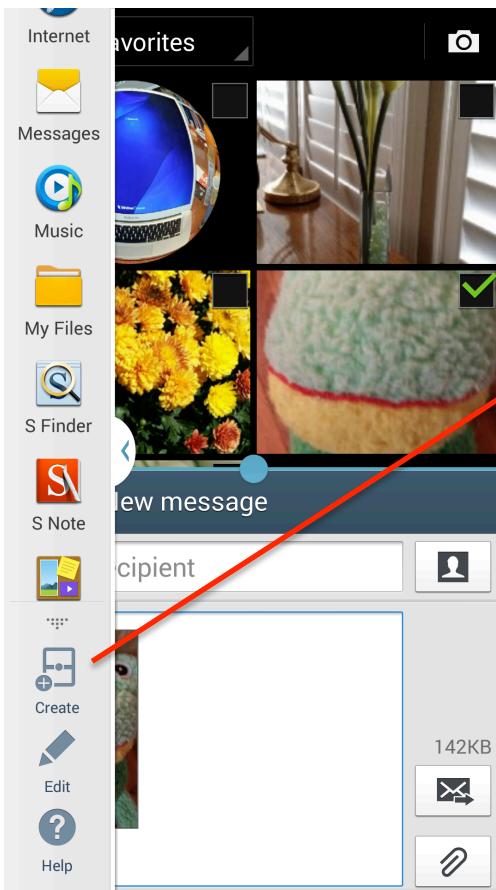

## ■ Adding to Tray

SAMSUNG DEVELOPERS

What's next? You decide.

# MultiWindow Features – Tray Paired Windows

SAMSUNG DEVELOPERS

What's next? You decide.

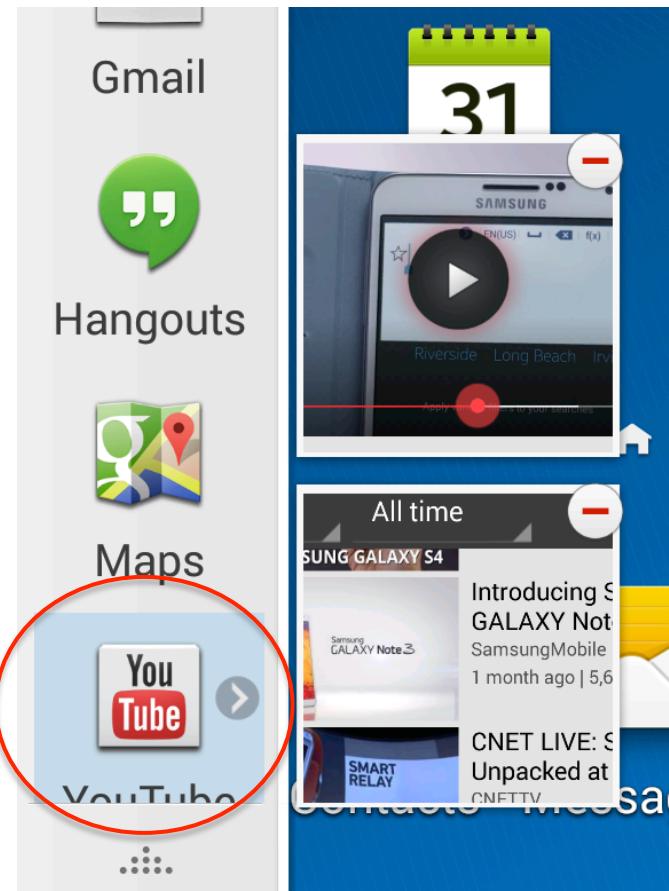

## MultiWindow Features -- MultiInstance

### ■ MultiInstance MultiWindow

- Up to 2 separate instances of your app running in their own instance of Dalvik
- MultiInstance-enabled apps have arrow indicating more options

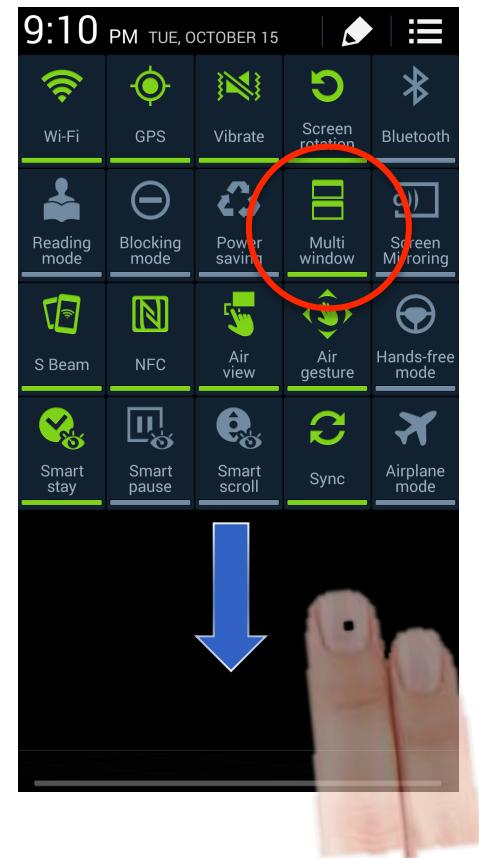

- 2 possible zones to open in

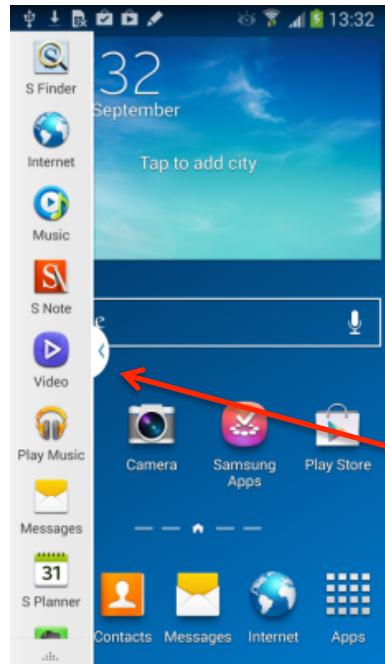

## Implementing: Easy as 1 – 2 – 3

- Turn on MultiWindow
- Add <meta-data> tags to the AndroidManifest.xml file
- Add 1 new <category> tag to the AndroidManifest.xml file

# AndroidManifest.xml: <MultiWindow> mode – Step 1

```
<application  
    android:icon="@drawable/ic_launcher"  
    android:label="@string/app_name" >
```

```
<meta-data  
    android:name="com.samsung.android.sdk.multiwindow.enable"  
    android:value="true"/>
```

Enables multiwindow and displays on multiwindow traybar

## AndroidManifest.xml: <MultiWindow> category – Step 2

```
<activity
    android:name="com.example.annatest.MainActivity"
    android:label="@string/app_name" >

    <meta-data . . . >

    <intent-filter>
        <action android:name="android.intent.action.MAIN" />
        <category android:name="android.intent.category.LAUNCHER" />

        <category
            android:name="android.intent.category.MULTIWINDOW_LAUNCHER" />

    </intent-filter>
```

## Adding MultiWindow -- Exercise 1

---

1. Start with “feels” project and open AndroidManifest.xml file
2. Locate the <application> node. Add the following line

```
<meta-data  
    android:name="com.samsung.android.sdk.multiwindow.enable"  
    android:value="true"/>
```

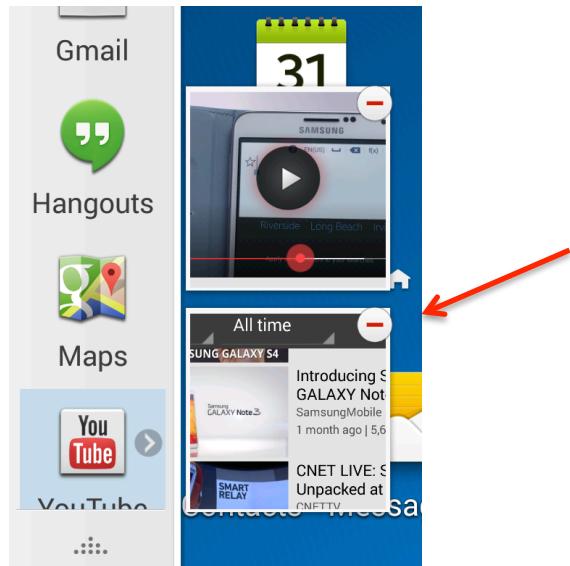

3. Locate <intent-filter> tag under <activity> node

[ . . . ]

## Extra Credit -- <MultiInstance> mode

<application>

```
<meta-data  
    android:name="com.samsung.android.sdk.multiwindow.multiinstance.enable"  
    android:value="true"/>
```

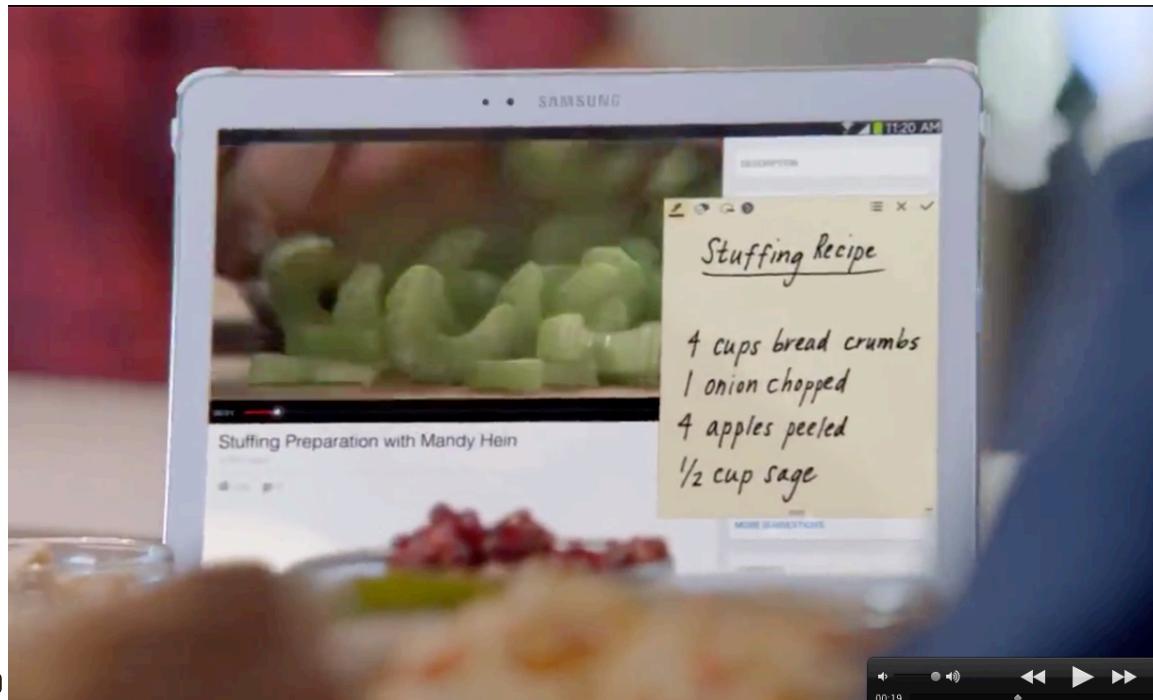

To support MultiInstance, launchMode in AndroidManifest.xml should be defined as standard or singleTop

## Extra Credit -- <PenWindow> mode

<application>

```
<meta-data  
    android:name="com.samsung.android.sdk.multiwindow.penwindow.enable"  
    android:value="true"/>
```

SAMSUNG DEVELO

# Coding for Additional Control

The screenshot shows a Java API documentation interface. On the left, there's a file tree with a folder named "multiwindow" containing "multiwindow-v1.0.2.jar" and "sdk-v1.0.0.jar". To the right of the file tree are two tables: "Class Summary" and "Methods".

**Class Summary**

Class	Description
<b>SMultiWindow</b>	Provides capability and version code api.
<b>SMultiWindowActivity</b>	SMultiWindowActivity class for MultiWindow.

**Methods**

Modifier and Type	Method and Description
int	<b>getVersionCode()</b> Return SDK version of multiwindow package,
String	<b>getVersionName()</b> Return SDK version name of multiwindow.
void	<b>initialize(Context arg0)</b> If the device is not supported, Exception(SdkUnsupportedException) will be occurred.
boolean	<b>isFeatureEnabled(int type)</b> Checks whether the feature is supported.

A red arrow points from the "Methods" table towards the "getVersionCode()" row.

# Coding for Additional Control

The screenshot shows the JavaDoc interface for the `multiwindow` package. On the left, there's a tree view with `multiwindow` expanded, showing `multiwindow-v1.0.2.jar` and `sdk-v1.0.0.jar`. To the right is the **Class Summary** table:

Class	Description
<code>SMultiWindow</code>	Provides capability and version code api.
<code>SMultiWindowActivity</code>	SMultiWindowActivity class for MultiWindow.

Below the Class Summary is the **Methods** table:

Modifier and Type	Method and Description
<code>Rect</code>	<code>getRectInfo()</code> Get size and location of MultiWindow
<code>int</code>	<code>getZoneInfo()</code> Get the window zone Information
<code>boolean</code>	<code>isMultiWindow()</code> Check whether window mode is multi window
<code>boolean</code>	<code>isNormalWindow()</code> Check whether current window mode is normal window
<code>static Intent</code>	<code>makeMultiWindowIntent(Intent intent, int zoneInfo)</code> Make an intent for starting Activity in MultiWindow Should use only one of the rect and zoneinfo.
<code>void</code>	<code>normalWindow()</code> Changed window state to normal.
<code>boolean</code>	<code>setStateChangeListener(SMultiWindowActivity.StateChangeListener listener)</code> set listner for detecting changing window mode and info.

# Callbacks for the State Change Listener

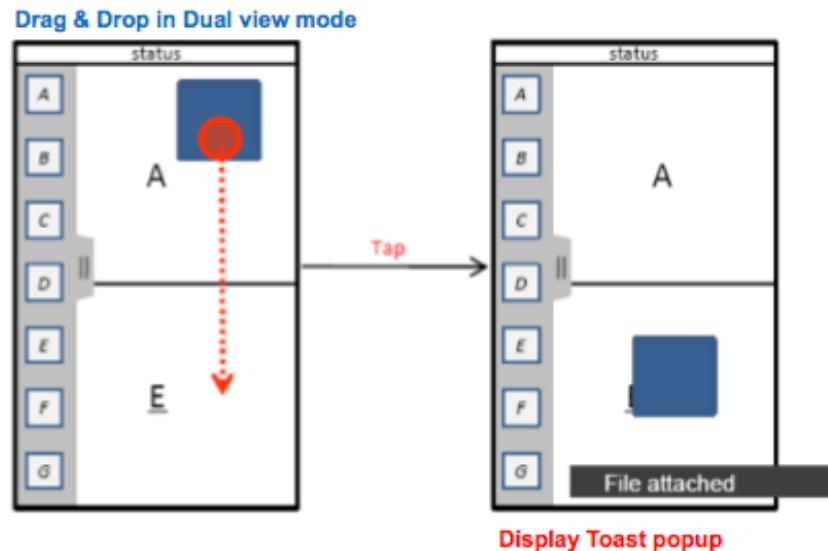

```
public interface StateChangeListenter( . . . )
```

Methods	
Modifier and Type	Method and Description
void	<b>onModeChanged(boolean isMultiWindow)</b> Called when activity is changed the multiwindow and normal window.
void	<b>onSizeChanged(Rect rectInfo)</b> Called when activity is changed the multiwindow size information.
void	<b>onZoneChanged(int zoneInfo)</b> Called when activity is changed the multiwindow zone information.

## Drag and Drop in MultiWindow

- 3 supported methods for Drag and Drop
  - Long click on Image or File
  - Long click on Text
  - Drag Mode in center button

- Drag Apps ?

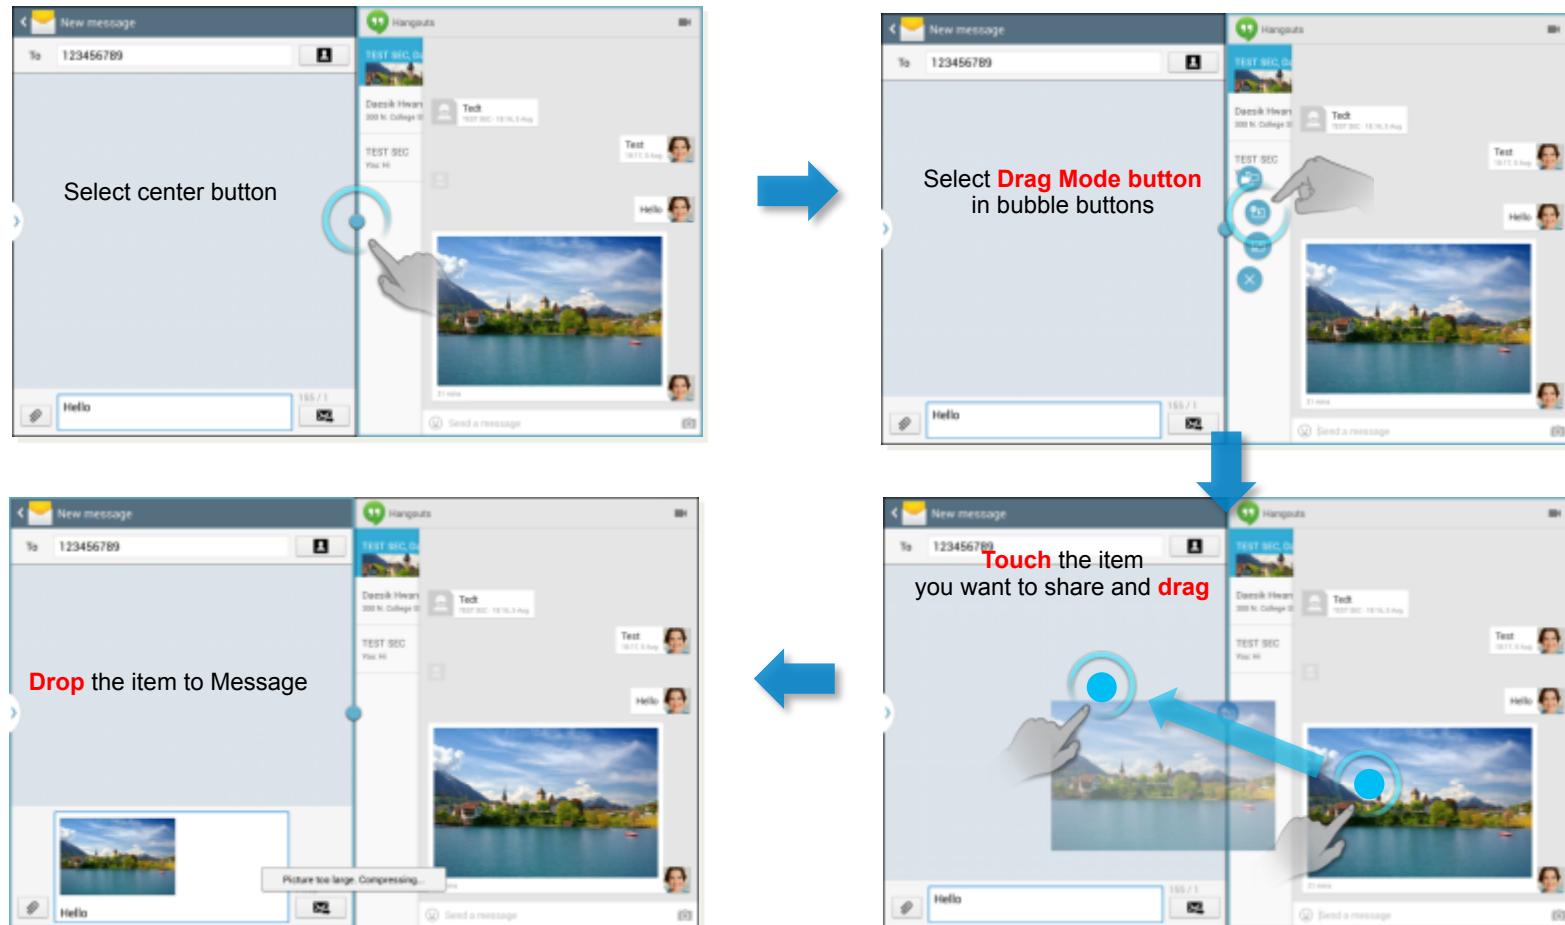

- Drop Apps ?

SAMSUNG DEVELOPERS

What's next? You decide.

# Drag and Drop – MultiWindow Button

SAMSUNG DEVELOPERS

What's next? You decide.

## Implementing Drag and Drop

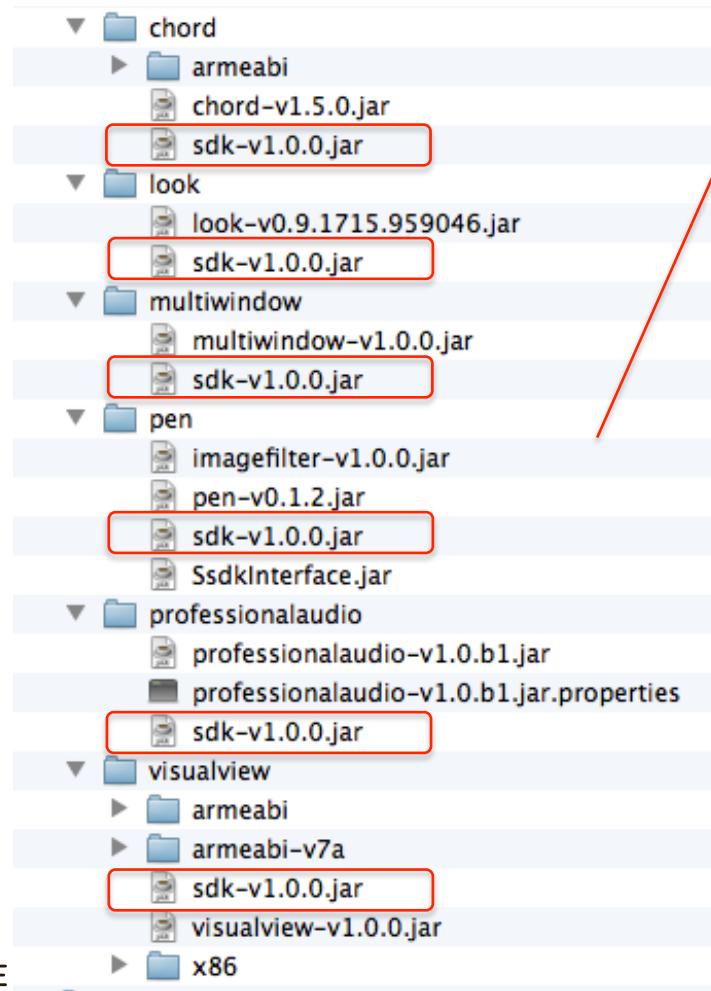

---

- Uses standard Android drag and drop listeners/ callbacks
  - <http://developer.android.com/guide/topics/ui/drag-drop.html>
  
- Uses standard Android clipboard to copy and paste data
  - <http://developer.android.com/reference/android/content/ClipData.html>

# Verifying features

SAMSUNG DEVELOPERS

# Samsung Mobile SDK Libraries

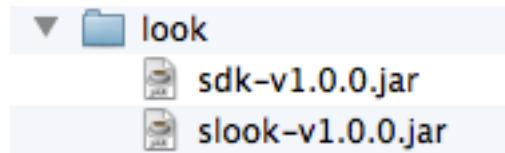

```

         └─ strManufacturer : String
         └─ isSamsungDevice() : boolean
```

- New APIs to check for presence and properties of technology

SAMSUNG DE

What's next? You decide.

## Example -- Implementing Look Features

```
@Override  
public void onCreate(Bundle savedInstanceState) {  
  
    Slook slook = new Slook();  
    try {  
        slook.initialize(this);  
    } catch (SsdkUnsupportedException e) {  
        // notify user device does not support  
        return;  
    }  
    if (slook.isFeatureEnabled(Slook.AIRBUTTON)  
    if (slook.isFeatureEnabled(Slook.SPEN_HOVER_ICON)  
    if (slook.isFeatureEnabled(Slook.SMARTCLIP)  
    if (slook.isFeatureEnabled(Slook.WRITINGBUDDY) {  
        Slook<class> variable = new Slook<class> }
```

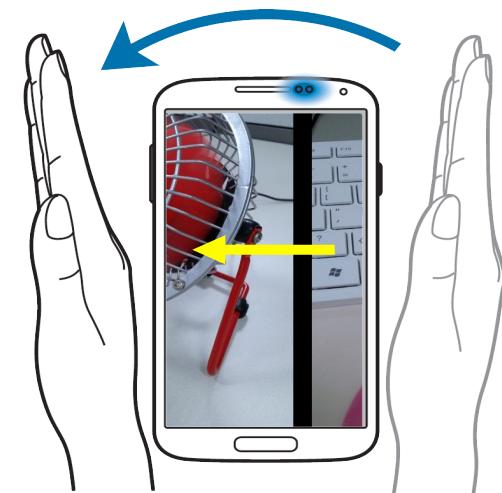

Gesture

SAMSUNG DEVELOPERS

## What is Gesture?

- Gesture allows you to use events generated by user's hand movements in your application
- Recognizes hand movements using data from the gesture sensor to the right of the device speaker
- Requirements:
  - Gesture sensor
  - Android 4.3 (Jelly Bean API level 18) or higher

# Gesture Package

## Interface Summary

Interface	Description
<a href="#">SgestureHand.ChangeListener</a>	This listener interface provides callback methods for SgestureHand events.

## Class Summary

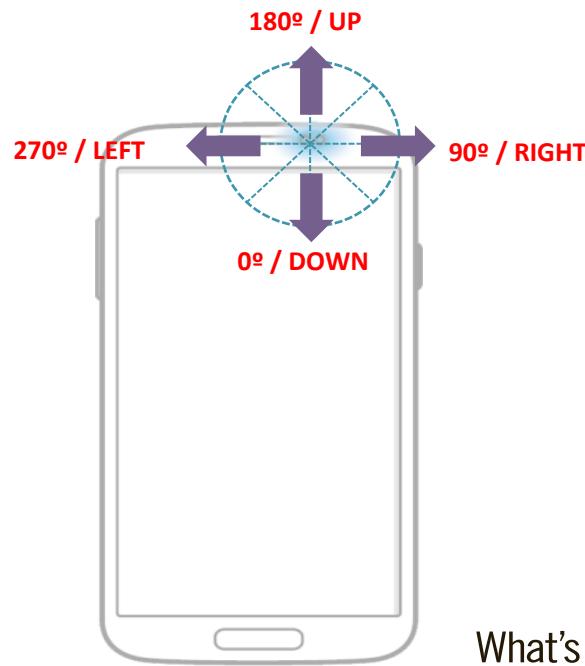

Class	Description
<a href="#">Sgesture</a>	This class provides support for recognizing hand movements.
<a href="#">SgestureHand</a>	This class provides the functionality.
<a href="#">SgestureHand.Info</a>	This class contains SgestureHand event information and provides methods to access the information.

## Implementation -- Check for support of feature

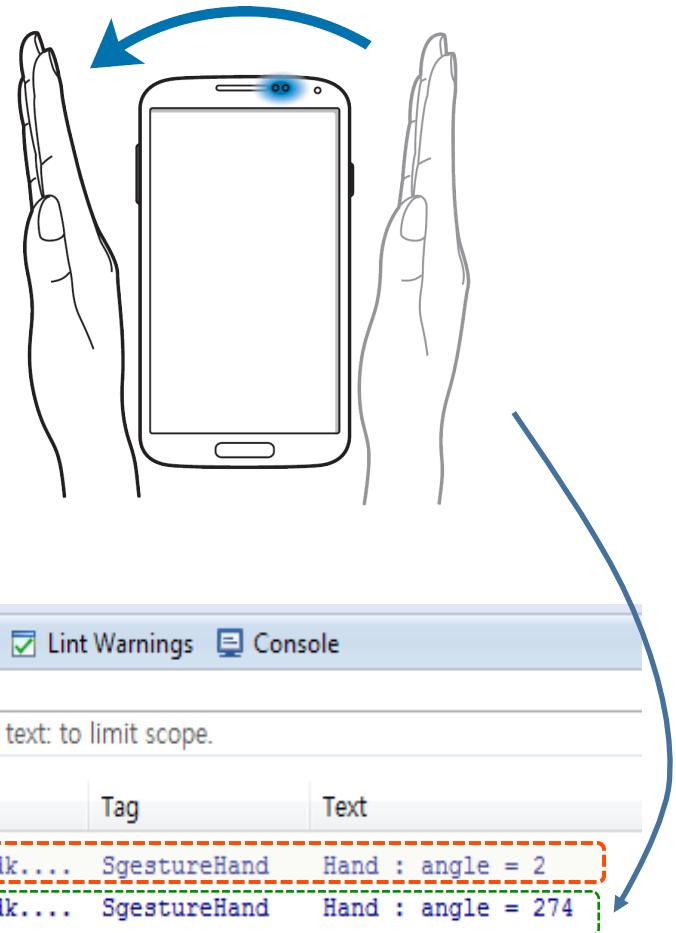

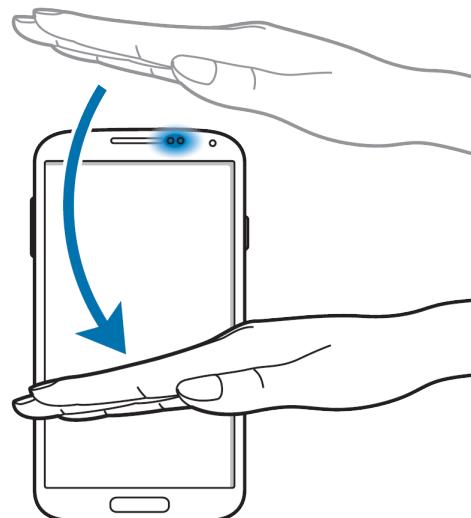

```
public void onCreate() {  
    private Sgesture mGesture;  
    private SgestureHand mHand;  
  
    mGesture = new Sgesture();  
  
    try {  
        mGesture.initialize(this);  
    } catch (IllegalArgumentException e) {  
        //Error Handling  
    } catch (SsdkUnsupportedException e) {  
        //Error Handling  
    }  
  
    if(mGesture.isFeatureEnabled(Sgesture.TYPE_HAND_PRIMITIVE)){  
        mHand = new SgestureHand(Looper.getMainLooper(), mGesture);  
        mHand.start(Sgesture.TYPE_HAND_PRIMITIVE, mChangeListener);  
    }  
}
```

# Register Listener

```
private final SgestureHand.ChangeListener mChangeListener =  
    new SgestureHand.ChangeListener() {  
        @Override  
        public void onChanged(Info info) {  
            Log.d(TAG, "Hand : angle = " + info.getAngle());  
            // do something with data  
        }  
    };  
  
public void onStop() {  
    mGestureHand.stop();  
}
```

# Reporting Angles

A screenshot of the Android Studio LogCat tool. The interface includes tabs for Problems, Javadoc, Declaration, LogCat (selected), Bug Explorer, Bug Info, Call Hierarchy, Lint Warnings, and Console. The LogCat tab shows a search bar and a table of log entries. The table has columns for Log Level, Time, PID, TID, Application, Tag, and Text. Two specific entries are highlighted: one with a red dashed border and another with a green dashed border. Both entries show a timestamp of 01-01 10:14:18.076, PID/TID 14986, Application com.samsung.sdk...., Tag SgestureHand, and Text Hand : angle = 2 for the red entry, and Hand : angle = 274 for the green entry.

L...	Time	PID	TID	Application	Tag	Text
D	01-01 10:14:18.076	14986	14986	com.samsung.sdk....	SgestureHand	Hand : angle = 2
D	01-01 10:14:42.696	14986	14986	com.samsung.sdk....	SgestureHand	Hand : angle = 274

## Adding Gestures – Exercise 2

---

1. Add gesture libraries to your project
2. Modify existing app to create global variables and routines
3. Add gesture

[ . . . ]
